

CAMPAIGN PREMISE

‘Juche Rises’

Winter 1988

In the wake of the Korean Air Flight 858 bombing, the DPRK regime under Kim Il Sung emerged emboldened rather than isolated, interpreting the limited international response as weakness and opportunity. Pyongyang doubled down on its doctrine of Juche, tightening internal control while accelerating military preparations under the rising influence of Kim Jong Il. Viewing the South as politically exposed and its allies distracted, the North launched a full-scale invasion across the DMZ. Although cautious, both the Soviet Union and China—will seek to preserve regional influence amid shifting Cold War dynamics—are are soon to be drawn into the conflict to provide material support and “advisory” forces as has happened in the past.

CAMPAIGN FLOW

Day 1

- Initial few hours is most performance intensive - avoid fragging over DMZ to not risk performance hits
- Stay defensive initially until campaign settles, either DCA staying South of DMZ or Coastal CAPs off on the flanks

Do big fast forwards between frags - aim for 4 or so hours to allow ground war to develop.

Day 2

- USSR joins flying 25/31 and strategic bombers from the N

Day 3

- PRC joins, bringing in a mass of new fighters
- They have massive industry and DPRK will reinforce

Day 4

- US Navy joins, bringing in F14, F18, A6 and further awacs and support platforms

Server Squadron (Human Control)
- C130, 9999th, Hiroshima

Player Squadrons (Human Control)
Cheongju
- 161st F16C32 ROKAF

Gunsan
- 80th F16C30
- 35th F16C30
- 44th F15C 'Early'

WIN/LOSE CONDITIONS

Win Condition:

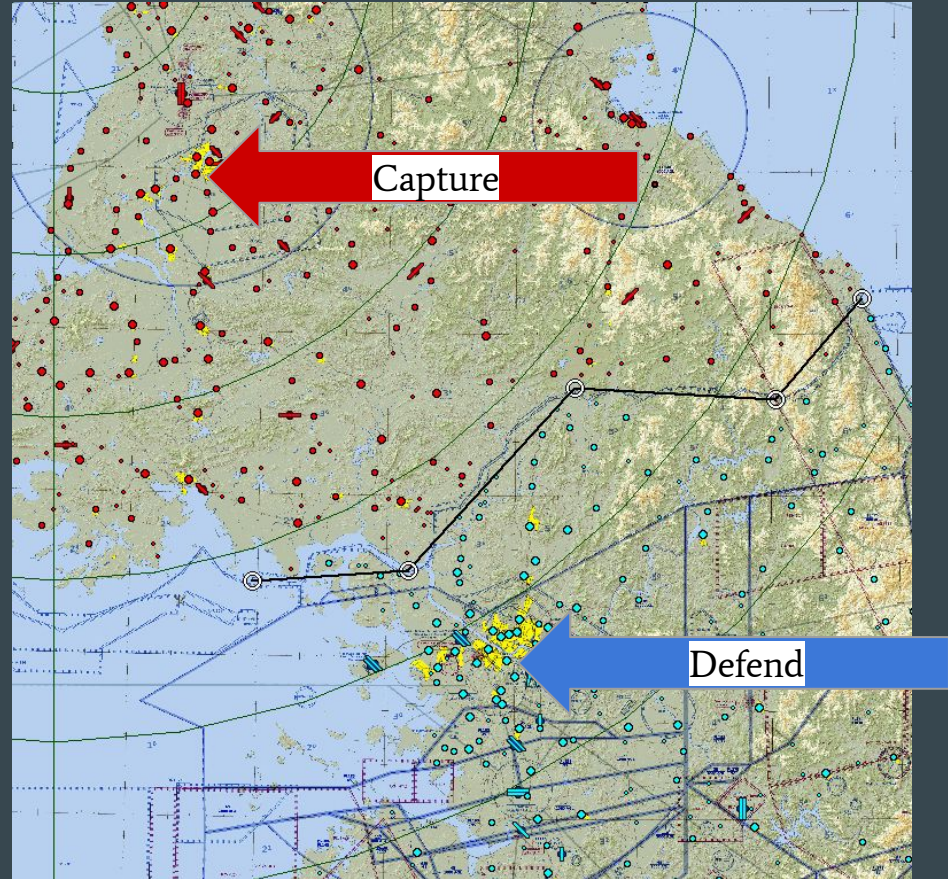

- Capture Pyongyang

Lose Conditions:

- Lose control of Seoul (DPRK crosses the river and captures Seoul South)

Stalemate:

- Neither condition by Day 10

ORDER OF BATTLE/CAPABILITIES

ROK

- F-16C32 (Sparrow M)
- F-4D/E
- F-5E

USAF

- F-16C25 (Heaters only)
- F-16C30 (Sparrow M)
- F-15A (No Flares) (Sparrow F)
- F-15C "Early" (Sparrow M)
- F-4G
- A-10A
- F-111F
- B-52

USN (Day4)

- F-14B
- F/A-18C (Sparrow M)
- A-6E
- EA-6B

JAPAN

- F-1
- F-4EJ
- RF-4E

Player aircraft not included in campaign:

- F16A/B15 (9L) (No chaff)
- '88 F16C32 (9M) (Sparrow M)
- '89 F16C40 (9M) (Sparrow M) (TGP+LGBs)
- '95 F16C42 (9M) (AMRAAM B) (TGP+LGBs+IDM+HARM)
- '95 F15C 'Late' (9M) (AMRAAM B)

DPRK

- Mig 29A (R27R/T)
- Mig 23 (R23R/T)
- Mig 21
- Mig 19 (Heaters) (RWR "A")
- J6 (Mig 19) (Heaters No Radar)
- Q5ii (Mig 19) (Heaters No Radar)
- Su 25 (Heaters No Radar)
- Su 7 (Heaters No Radar)
- Il 28

USSR (Day 2)

- Mig 25 (R23R/T R40R/T)
- Mig 31 (R27R/T R40R/T)
- Tu 95
- Tu 16

PRC (Day3)

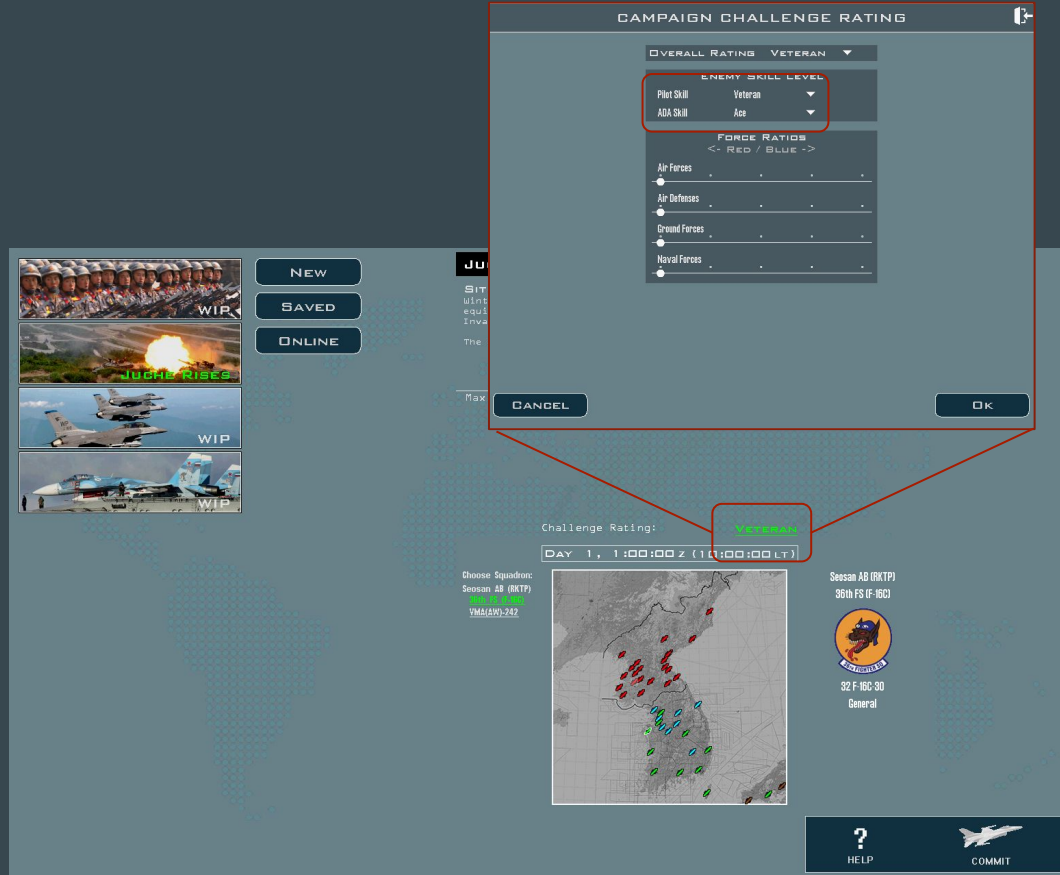

- J8 (Mig 21)
 - PL4A SARH
 - PL4B IR
 - PL7/8 IR
- J7 (Mig 21)
 - PL7/8 IR
- J6B (Mig 19) (Heaters) (RWR "A")
- Q5n (Mig 19) (Heaters No Radar)

NOTE FOR FRAGGERS - SKILL LEVEL

Pilot and Air Defence skill level is globally controlled in BMS by the Challenge Rating in the 2D, UI in the campaign selection screen. These settings are saved in the local pilot configuration file and are local to the BMS installation. However, they are propagated into the save file and can change the AI behaviour if not enough care is taken.

The recommended settings are **Veteran** for the *Pilot* and **Ace** for the *ADA* skill. The sliders below have no impact. Those settings only work for the opposing side and do not change the player side skill level. However, if you join as RED team to adjust the frag, you will change the BLU side skill level. If you save and join the BLU side afterwards, both sides will have equal skill levels. If you are fragging on your local machine, which has other skill settings than recommended, you will propagate those settings into the save file.

When starting the event on the BMS server as the BLU side, the Challenge Rating of the server will be applied to the opposing side but the friendly side will inherit the skill level from the save file.

NOTE FOR FRAGGERS - SKILL LEVEL

The challenge rating, also referred to as skill level, is visible as Experience in the *.cam file in the Mission Commander Teams->Other tab. We are aiming to have the enemy Air and Air Defence experience at 80-100 level respectively, which corresponds to Veteran and Ace levels. The friendly skill level should be kept low, below 50 to avoid wiping out the RED force in the 2D while accelerating the time. Ground and naval experience is not affected by the 2D UI and should stay at the levels set in the original save file.

To summarise, here is a checklist for the fraggers:

- Check that the Challenge Rating on the server and your local computer is set to Pilot=Veteran & ADA=Ace
- After you saved the final mission file, open it in Mission Commander and confirm that the Experience levels are Air=80 & Air Defence=100 for DPRK and Air=50 & Air Defence=50 for ROK

Remember that when you enter the campaign, the opposing side will inherit the skill level set in the 2D UI.

NIGHT OPS TOOL

Night Ops tool is intended to adjust fragging parameters and if needed clear the ATO to switch cleanly between Night and Day states without the use of MC.

Use if fast forwarding night - to avoid the airwar killing itself while no players are interacting. Use it to build night frags with more appropriate and meaningful night Ops.

Steps:

Save campaign in 3d at desired local time around sunset.

Find and the “Campaign Day_Night Tool.bat” in BMS 4.38\Data\Add-On UOAF 80s_test\Tools

Select Day/Night state.

Select if you would like to wipe the ATO

- Wiping the ATO will remove all fragged flights and allow the campaign to resume with the new selected day/night state

Select if you would like to overwrite the save

- Yes, overwrites the name. Old file is renamed to “_bak”
- No, leaves original file. New file is named “_wiped”

Select your save from the list

Go back into 2d campaign map.

If playing Night Op event - remember to switch the server over to Night state also before the event(and recommend to put it back to day afterwards)

```
